LOCAL ITEMS

The season for grouse of the sharp tail variety (prairie chicken) opened on Oct. 1st and closes Oct. 15th in the area north of the Red Deer river only. The limit is five per day, or 25 for the sea- sea. Hungarian partridge from Oct. 1st to Nov. 15th. Limit, 15 per day, or 75 for the season, Sunday shooting prohibited.

Mrs McKay, manageress of the Chautauqua circuit, spent Monday in town making final arrangements with the local committee for this year's entertainment. Arrangements are being made for the use of the agricultural building, and the dates are Oct. 21 22-23-24. The committee in charge of getting the hall ready: McLean, Chapman, Les, Berry, R. Stewart and W. A. Todd.

The Traveller for Heath's Ltd. (Calgary) will be at Hurley's store on Thursday, Oct. 10th, with a full line of Ladies' High-class Ready-to-wear Suits, Coats and Dresses, also Sports Wear Garments for Fall and Winter.

Mrs. Jno. Cooley returned the first of the week after spending several days with her mother and brother at Calgary.

Ken Parks of Sibbald spent a day or two this week renewing acquaintances.

Cooley Bros., of the Service Garage, report the following deliveries during the past week: Jac. Neufeld, new Ford Dealer; Geo. G. Hobbs, new Ford Dealer; Norman L. Scott, used Buick; John Smart, Cereal, used touring; Chas. Langer, Cereal, used Ford touring.

O. L. Meilke left by car on Sunday on a business trip to south-eastern Montana. He expects to return in about a week.

The young ladies of Chinook met at the home of Mrs. L. Cooley on Sept. 18th and formed a merry music club, the "Chumy Circle." The officers elected for this term were: President, Mrs. F. L. Bassett; Vice-Pres., Mrs. H. Butte; Secretary, Miss M. Bayley.

A meeting of the Chinook Curling Club will take place at the rink next Tuesday evening, Oct. 8th, at 8 p.m. All interested are requested to attend.

During the week many hunters have been trying their luck with the prairie chicken and geese. Some fair bags are reported, while others have not been so fortunate, especially in the goose line.

The Chumy Circle met last week at the home of Mrs. M. Knibbs.

A most enjoyable evening was spent Wednesday, Oct. 3rd, at the home of Mr. and Mrs. Norman Kerr, when the Echo Club entertained at a chicken supper in honor of George Aitken and his nephew James. About twenty sat down to supper, and thereafter a social time was spent in song and story till the "west sm. hours." The Messrs. Aitken leave in a few days for their home in Vancouver.

The Ladies' Aid will meet at the home of Mrs. Hurley next Wednesday afternoon.

The school teachers of the Oyen and Hanna inspectores will hold their convention at Hanna on Nov. 7th and 8th.

Jack Morrison, of Kinmundy, left this week for Edmonton where he will take medical treatment.

O. Nelson received the sad news of the death of his father, Chas. Nelson, which took place at Comrey, Alta., on Friday, Sept. 27th. Mr. Nelson attended his father's funeral at Comrey on Sunday, returning to Chinook Monday evening.

Mrs. W. W. Wilson entertained a number of ladies on Friday of this week in honor of Mrs. Hess and Mrs. Anderson who are leaving shortly for California, where they will spend the winter.

A Good Save

Last Thursday afternoon the citizens of Chinook heard the clang of fire bell for the first time in many months. Smoke was discovered coming through the roof along side the chimney of the house owned by R. Stewart,

Upon arrival of the volunteer fire fighters, flames were discovered on both floors, which held out little encouragement of saving the building. However, with the application of the chemical and the absence of wind, the fire was soon under control, but not before everything within the building was badly charred.

The house was tenanted by Jno. McPherson, whose daughters are attending school, who claim to have had little fire in the stove. They were unfortunate in losing almost everything in the fire.

Mr. Stewart carried a fair amount of insurance, and it is likely he will remodel the house as soon as the insurance is adjusted.

Harvest About Completed

Though the weather during the past two weeks has not been all that could be desired owing to a few showers, harvesting is about finished in this district. Considerable threshing has to be done, and even that should not take a great number of days. No outside help has been required.

While the yield is small, a good quality of wheat is being marketed, grading mostly No. 1 and No. 2 northern. To date, in the neighborhood of 55,000 bushels have been brought in to the elevators.

From present indications there is little likelihood of anything in the feed line having to be imported as many dry sloughs have been cut for hay, and mining has been fortunate enough to hold oats over from previous years which will furnish them and their neighbors with seed oats for next year. Much depends upon the length and severity of the winter, when some feeds oats may be needed.

C.G.I.T. Organization Meeting

The C.G.I.T. group met at the church last Thursday for organization purposes. Miss Emes was chosen as leader.

The following officers were elected: Helen Dawson, President; Eileen Bjork, Vice-Pres.; Florence Connell, Secretary; Joan Bayley, Treasurer; Florence Connell, Song Leader; Betty Milligan, Reporter; Joan Bayley and Eileen Bjork, Games Committee.

Meetings will be held every Thursday afternoon.

The C.G.I.T. had a very enjoyable time Monday afternoon, having a paper chase. Betty Milligan and Irene Rennic acted as hares, whilst the leader and the rest of the girls were the hounds. The hares got away to a good start, and in spite of a clear trail and vigilant hunting they were not run to earth. The leader gave the hunted girls great praise for their success.

Dominion Government Ironing Out Resources Bills

The federal department of justice at Ottawa is now working on the details of the agreements reached with Manitoba and British Columbia respecting the return to the former of its natural resources, generally, and to the latter of the lands in the "Railway Belt" and Peace River block.

In Manitoba, the government is reserving an area for a national park, but it is not quite decided where it will be.

In the case of Alberta, agreement lines mainly similar to those of Manitoba is expected shortly, while new negotiations would be opened up with the Anderson government in Saskatchewan.

Mr. and Mrs. Harry Nelson, of Innisfail by motor, and will visit their son Leo there.

Mrs. King, of Kinmundy, entertained friends to six o'clock dinner on Wednesday.

The service which was held in the United Church last Sunday evening was well attended. The service next Sunday will be held in the afternoon, and it is hoped the attendance will be larger than the previous Sunday.

Mr. and Mrs. Youell and family returned from their two weeks vacation on Saturday.

Canadian Anomalies

Following the close of the Great War by the signing of the Armistice, Canada demanded and was accorded a place of equality with other nations at the world at the Peace Conference, and with the creation of the League of Nations, Canada entered that League on exactly the same terms as all other nations. That is to say, Canada was recognized as a nation. And in signing the League Covenant, Canada accepted the responsibilities of a nation.

At the last Imperial Conference, in London, with all the self-governing Dominions of the Empire and the British Government fully represented, a formal declaration was adopted setting forth that Canada and the other self-governing Dominions were fully autonomous nations within the British Commonwealth of Nations, possessing exact equality with Great Britain.

As a logical outcome of these declarations, Canada has established her own legations in certain foreign countries, appointed her own ministers, and, in turn, these countries have named ministers at Ottawa. Thus, as a nation, Canada has direct representation at Washington, Paris and Tokio, in exactly the same manner as any other country. Equally significant is the fact that the British Government has appointed a High Commissioner to Canada, while Canada maintains a High Commissioner in London.

But while Canada is thus recognized as a nation, it is the only nation in the whole world which has no nationality of its own, and no distinctive flag of its own. These are anomalies which other people find it extremely difficult to understand.

In England, people born in that country are recognized and officially listed as English; if born in Scotland, they are listed as Scottish; in Ireland, as Irish; in France, as French; in Germany, as German; in the United States, as American. Born in Canada, on the other hand, a person may be listed as of any nationality under the sun except Canadian. Officially, there is no such person as a Canadian.

The writer of this article was born in Canada as were his father and mother. His mother's parents were both born in Canada. His father's parents were born in Ireland, their ancestors having crossed to the Emerald Isle from Scotland. So the writer becomes, in Canada, an Irishman although neither he nor his parents ever saw Ireland. If his grandfather had been born in Spain, then the writer would be a Spaniard.

In the face of such an anomaly, such a ghastly absurdity, it is little wonder that the people of other countries laugh in the face of any person born in Canada who is bold enough to lay claim to his country being a nation.

Every nation in the world, except one, has a distinctive flag of its own. The exception is Canada. Australia, New Zealand, South Africa, Newfoundland, the Irish Free State all have their distinctive national flags, as well as the Union Jack, the flag of all of Great Britain and the Empire. Canada has a distinctive flag for its merchant marine, and by Orders-in-Council it has been decreed that this shipping flag shall be flown over Canadian Government buildings in the British Isles, and in foreign lands, but it is not officially recognized anywhere else.

Thus, while a Canadian may fly a distinctive Canadian flag over a ship owned by him, he may not fly it over his office building or his residence, and while such a flag may be flown over a Canadian Government building in London, Washington, Paris, or Tokio, it cannot be flown over a Canadian Government building in Halifax or Vancouver, or anywhere between these two points.

A person born in Canada is, therefore, that peculiar individual among the peoples of the world who has no nationality he can call his own, and no distinctive flag that he can properly fly in his own land and over his own home and public institutions.

And yet the people of Canada find pride in calling Canada a nation. Why, this so-called nation of Canada has not even the right to amend its own constitution, a power possessed by other self-governing dominions of the British Commonwealth.

Canada is, and is proud to be, and desires to remain, a part of the British Commonwealth of Nations. It is proud of and loyal to the Union Jack as the flag of that great Commonwealth, and will ever retain it. But just as the Dominion has its own Coat of Arms, and each Province its Arms and each city its Arms, so do the people of Canada desire to establish and retain their own nationality, have their own distinctive flag, and enjoy full autonomy in their domestic affairs.

Much as a native-born Canadian may love England, or Scotland, or Australia, or New Zealand, he does not desire to merge his identity or lose his individuality. He is a Canadian and desires to be known as such, not as an Englishman, a Scot, an Australian or a New Zealander.

If Canada is a nation, let it display the qualities and the insignia of a nation.

Student Aviator Gets Thrill

Fell Out Of Plane But Fortunately Had Parachute

Arthur Carter, automobile dealer and student aviator, of Springfield, Mass., experienced an unexpected thrill when he fell out of his plane while flying 1,800 feet over Springfield field airport.

Carter, who was flying without a safety belt, but who had a parachute, pulled the cord of his parachute and made a landing unhurt. The plane fell in an open field and was demolished.

School Teacher: "If a farmer has 14,000 pecks of potatoes, and he sells them for 20 cents a peck, what will he get?"

Small Boy: "A set of golf clubs, a radio, and a town car."

Reconstructing A Liner

Timber From Many Countries Used On Palatial Steamer

Timber of many forests in many countries has been used for reconstruction and redecoration during the seven weeks' overhaul of the White Star liner "Majestic," which recently left Southampton for New York, on her one hundredth west-bound crossing. The varieties of wood included oak, mahogany, teak, beech, ash, satinwood, walnut, Oregon yellow and pitch pine, deal, forty-four tons of paint was used on interior and exterior work, whilst 18,000 yards of electric wire was used in wiring electric bells and electric lights in cabin of tourist third class accommodation.

Women Are Excluded

By the ironclad rule of a woman, no woman has ever entered the gigantic Krupp plant except the former kaisarin. The regulation was laid down by Frau Margarethe Krupp, for years chief director, and continued in force by her daughter, the present owner, Frau Bertha Krupp Von Boklen and Halbach.

Five hundred years before the birth of Christ, Hippocrates, a Greek, wrote a book on medical science which is still studied by students in America and Europe.

All Weather Road Promised

From International Boundary To Prince Albert National Park

An all-weather highway from Regina or the boundary to Prince Albert National Park will probably be put into condition, F. R. MacMillan, of Saskatoon, president of the Saskatchewan Conservative Association, told members of the Kiwanis Club at Prince Albert. He thought that this should be the policy of the government, and the fact that a cabinet minister in the Anderson Government, Hon. J. A. Merkley, was on a trip to the park was an evidence of the government's interest.

HEALTH REGAINED

Mother and Daughters Restored Through the Use of Dr. Williams' Pink Pills

"Contrary to what my friends once thought, I am still living," says Mrs. Norman White, New Canada N.S., "and I give the credit to Dr. Williams' Pink Pills. I had been a sufferer for some years with a run-down, my heart would palpitate violently at the least exertion. I grew so weak that I could not do my housework. I was under a doctor's care, but it did not benefit me much. My doctor, Dr. Williams, strongly urged me to try Dr. Williams' Pink Pills. It was like grasping at a straw, but six boxes of this medicine were got for me and when the time I had to take it I was able to sit up. Another six boxes were got and soon I was able to go about, my health steadily improving. I continued the use of the pills until I felt my health fully restored. I still take the pills occasionally as a safeguard." My two daughters have also used the pills with the most beneficial results. The trouble in both cases was the anaemia so often found when you are entering womanhood. Under the use of this medicine both fully regained health, strength and activity.

You can see, therefore, that it is impossible for me to praise Dr. Williams' Pink Pills too highly, and I hope every weak person who may read this will benefit by my experience." You can get these pills from any medicine dealer or by mail at 60 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Escape From Submarine

Men Leave Submerged Craft In Record Time During Experiment

Ten men emerged from the sunken submarine T-17 in forty-eight seconds during a submarine experiment in Italy, making what is called a world record for such a feat.

Half of the participants used head pieces, while the others were not especially equipped. The submarine carried a new device consisting of a large bulb beneath a torpedo tube permitting the men to leave the submarine without water entering the hull.

A Household Medicine—They that are acquainted with the sterling properties of Dr. Thomas' Electric Oil and the treatment of all ailments will not be without it in the house. It is truly a household medicine and as it is effective in dealing with many ordinary complaints it is an handy substance to have. So keep it at hand, as the call for it, may come most unexpectedly.

What's In A Name?

An Englishman's home is his castle, but whether he is able to call his castle what he likes is a matter of some doubt. The thought arises because the Bank of England owners have decreed that the words "Bank of England" on a building in Bury must be removed. The words carved in bold letters in stone, have adorned this building for over a hundred years. Why they are there on knowns.

Her Little Boy

Was Very Ill With Summer Complaint

Mrs. Ray Fisher, Lebret, Sask., writes: "For over a month, last summer, my little boy was suffering from summer complaint. He had sat down to eat his meal, and anything he ate would not stay on his stomach very long. He became so weak he could not stand up. A neighbor recommended

"Defoulers Extra Wild Strawberry" and in despair I sent for a bottle, not expecting any more benefit than from the many other medicines I had used, but to my surprise he quickly changed after he had taken a few doses, and before the bottle was half used he was the same happy, healthy boy he was before he took sick."

Put up only by The T. Milburn Co., Ltd., Toronto, Ont.

W. N. U. 1805

Wheat Grading High

Quality Year In Wheat Production In Saskatchewan

This year is a quality year in wheat production in Saskatchewan. Seventeen cars of No. 1 hard wheat have already been received by the flour mills at Saskatoon. In each of the years 1927 and 1928, there was just one car of No. 1 hard wheat produced in western Canada.

The wheat graded by the Dominion grain inspector at Saskatoon up to the present time shows a very high proportion of the high grades, as follows:

No. 1 hard, 6 per cent.; No. 1 northern, 51 per cent.; No. 2, 39 per cent.; No. 3, 4 per cent.

A part of the No. 2 is Garnet wheat to which the No. 1 grade is not given.

At the Moose Jaw inspection point 50 per cent. of the wheat is No. 1, 35 per cent. No. 2, and the balance mostly No. 3. A. McPherson, of the Dominion seed branch, reports.

This year northern Saskatchewan is producing wheat of equal quality to that grown in the southern part of the province. This is held to be unusual as excess moisture during the growing season in most years makes the northern wheat starchy. The Elrose line is producing a high percentage of No. 1 hard, Hughton and Elrose being outstanding shipping points.

Interested In Peace Garden

Financial Support Promised By Industrial Concerns In U.S. and Canada

Interest is developing in a proposal of horticulturists of Canada and the United States that an International Peace Garden be established at some point along the boundary between the two countries. The idea is through expressions of approval from the Governor-General of Canada and Hon. William Phillips, the United States ambassador to the Dominion, as well as from several Canadian politicians of cabinet rank. The heads of many large industrial concerns on both sides of the boundary have promised financial support, and a considerable sum is in view as a nucleus of endowment for the garden.

Certain it is that a garden of the sort proposed would be a beautiful and fragrant memorial to the well more than a century of peace between Canada and her neighbor, and also an impressive pledge of goodwill. Its spiritual value at all times would depend upon the degree to which it was a symbol of cordial feelings of the people of the two countries towards one another and as carried into practice by them. —Regina Daily Post.

Romanian Scientist Designs "Space Rocket"

Hopes To Carry Mail To America In Thirty Minutes

A "space rocket," designed to shoot upward for 32 miles, and it is hoped, be the forerunner of a rocket that will carry mail to America in 30 minutes, is to be built at once, it has been learned.

Prof. Hermann Oberth, a Romanian scientist, designed the rocket. It will be built under the supervision of the U.F.A. Film Company. Its object, for the first flight, is to measure the physical and chemical properties of the atmosphere. Instruments will be enclosed in it to this end.

Holloway's Corn Remover takes the corn out by the roots. Try it and prove it.

Winnipeg Heads List

Aviation Club Has Record Of Over Thousand Hours In Air

The rapid growth of air-mindedness in Canada is indicated by the fact that members of clubs in Canada have flown more than 10,000 hours during the first eight and a half months of the year.

The Winnipeg club heads the list with well over 1,000 hours in the air; Toronto comes second with about 1,000 hours, and Ottawa third with just over 900 hours.

One hundred and ninety-two new private and 57 commercial pilots have graduated from the ranks of the students in the clubs. In 1928 the figures at the end of the year showed 111 private pilots and 28 commercial.

This year there are 22 clubs in actual operation as against 15 last year.

Old Dobbin had one good point. Nobody brought out a new model about the time you got him paid for.

Artificial Silk From Acetic Acid

Combined With Cellulose Will Make Fibre As Preceded

Prediction that the sour taste in vinegar will be used to make artificial silk was made to the United States Chemical Society today by Professor D. B. Keyes, of the University of Illinois. The sour substance with which chemistry's magnetic touch may make finer dressed silk was called by Prof. Keyes by his scientific name, acetic acid. He told of a newly-developed process at Illinois for making it developed in co-operation with E. P. King and Sherlock Swanson, of the university. For making artificial silk it is combined with cellulose to form cellulose acetate.

Externally Or Internally, It Is Good—When applied externally by brisk rubbing, Dr. Thomas' Electric Oil opens the pores and penetrates the tissue, removing secretions and impurities, and giving relief. Administered internally it will still the irritation in the throat which induces coughing and will relieve affection of the bronchial tubes and respiratory organs. Try it and you will be convinced.

Makes Ninety Miles An Hour

Moth Plane Purchased By Prince Is "Pure British"

The Prince of Wales made his first flight as owner of an airplane, to see his father at Sandringham. It is a G. H. Gypsy Moth, price only \$3,300. The Prince would not buy anything not "pure British." The little Moth makes 90 miles an hour, is painted bright red and blue and carries a silver plate marked "H.R.H. The Prince of Wales." The little machine with aluminum nose is upholstered in scarlet leather which can be inflated to avoid bumps.

Mysteries Are Wrapped Up In Strange Disappearances Of Many Deep Sea Vessels

Denmark has abandoned as hopeless its long search for a clue to the fate of the full-rigged clipper training ship "Copenhagen" with sixty cadets aboard seen for the last time in the throes of her struggle with a heavy sea off a lonely island in the South Atlantic. During the seven months of weary exploration that has intervened, so much as a spar, a lifeboat or a piece of floating wreckage has rewarded the Danish seamen who undertook the quest for the missing ship. The mystery that envelops the Copenhagen closely resembles that attending the disappearance of the United States coast "Cyclone," and it has prompted the New York Sun to recall other instances of the sea to recall other mysteries unsolved.

In the latter part of 1928 an American steamer came upon the schooner "Mary Cornish" in mid-Pacific. Nothing indicated that the schooner had suffered from disastrous weather or that it had been swept by a high sea. Bloodstains were found on a newspaper in the cabin, but no evidence of a struggle; there was neither officer nor crew aboard, and no boats were missing. What had occurred aboard the craft will, "in all probability, never be known. Two years before this the captain of the French sailing ship "Emile Galline," in rounding Cape Horn, found a three-masted vessel embedded in an iceberg. The craft was firmly fixed in a cleft of the ice mass about twelve feet above the water's edge and, with the exception of a broken topmast, appeared intact. There was no sign of life aboard, and all the boats were in place. He reported the circumstance and the ship was tentatively identified as one long reported missing, but no one was able to offer an explanation.

A French steamer fell upon a large junk in the China Sea, which, upon investigation, the master found was deserted. In the junk he same upon a cargo of silk and a considerable sum of money. The only explanation was offered by a Chinese member of the crew; who said that it was a craft belonging to a band of pirates who had fled the vessel in fear that the steamer was a disguised warship. As strange a discovery was reported by the captain of a Dutch liner plying among the West Indies and along the South American coast. He boarded a tramp steamer destitute of life except a starving dog. He found evidence that the crew had only shortly before abandoned the vessel. His theory was that when the ship had become becalmed they had taken to a small boat in the hope of towing the vessel, but had been swept away by a strong current. The steamer had been listed among missing ships, but in this case, too, only conjecture was left regarding the fate of its crew.

Not always does Old Man Sea leave so much of a clue to his mysteries. It is because he restored these missing ships to human ken that another chapter could be written of their disappearance.

A Strange Coincidence

Peter Archer, a six-year-old boy, of Hull, England, who was knocked down by a motor omnibus and seriously injured, was being taken in an automobile to Hull Royal Infirmary, when the ambulance was stopped for a man who had been injured at work. He proved to be the injured boy's father.

Mrs. Brown eyed the joint critically.

"Tell your master," she said to the butcher's boy, "that I shall buy my meat elsewhere if he doesn't correct the error of his 'weights'."

"Have you ever heard of mountaineers that fall?"

"No, and don't expect I ever shall!"—Lustige Sachse, Leipzig.

To Assist Farmers

Saskatchewan Farmers In Dried Out Areas May Import Fodder Free Of Transportation Costs

Farmers in the drought-affected areas of Saskatchewan, forced by circumstances to import fodder for their live stock, will be able to do this free of all transportation costs, according to an agreement between the Government of Saskatchewan on one hand, and the two railway companies on the other. Freight charges on fodder supplies into, and on haying out, will be borne jointly by the government and the railway companies. Under the arrangement, the provincial government undertakes to pay the freight charges while the railway companies undertake to reduce 50 per cent., according to Frank W. Thompson, chairman of the Canadian Freight Association.

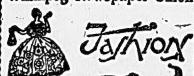

New Varieties Of

Rust-Resisting Wheat

But Production Not Yet Sufficient For Seed Distribution

Two or three varieties of wheat which will resist rust have been developed by the Department of Agriculture, it was stated by Dr. J. H. Grisdale, Deputy Minister of the department. "Our experiments this year confirm the earlier prospects," said Dr. Grisdale. "No names have yet been given to the new varieties, and it will be two or three years before they can be produced in sufficient quantities for seed distribution, but we feel confident that we have the kind now that will resist the known varieties of rust."

Canada's Dairy Industry

Canadians Are Eating More Butter Than Ever Before

Dairying is a rather flourishing business in Canada right now. Canada is eating more butter than ever before. We are large consumers of this product. In 1928 we consumed 28.31 pounds per capita in this country as against about 18 pounds per capita in the United States. This is accounted for partly by the elimination of oleo-margarine from our market, although it is sold in the States. Also our butter is a better butter and induces a liberal use.

The only real competition our dairyman face is in New Zealand butter, which is imported during the winter months, in small but increasing quantities. Canadian producers find that their storage product must compete against the fresh New Zealand product and the competition is difficult. But the effect of the importations has been exaggerated.

In cheese, Canada is building up a commanding position throughout the world. This is due chiefly to the fact that Canadian Cheddar Cheese is of high quality and sells at a premium in British markets over other imported cheese. This fact was referred to in a recent article in the Canadian Business Review, published by Cockfield, Brown & Co., advertising and merchandising experts of Montreal. The article was from the pen of Duncan Marshall, former minister of agriculture in Alberta, who is now a member of their staff.

There is a lesson in our experience with cheese. By improving quality, by grading properly and by establishing good marketing facilities we have put our cheese beyond the range of competition. Given proper leadership by Dominion and provincial departments of agriculture, our butter producers could do the same thing.

The greatest danger in the dairy industry at the present time is within rather than outside of the industry. It lies in the fact that the demand for cows is so great that many men are tempted to break up their flocks when they should be building them up. Financial Post.

To Exterminate Insects

Electric Light Rays Are Now Used With Good Effect

Light rays and electricity are being used in exterminating insect pests. Electric light traps, consisting of a lamp set directly over a pan of water upon which a covering of oil has been poured, entices the insect, who invariably falls into the film of oil and is unable to arise.

An electrified screen stable door has proved feasible. The screen is charged with high voltage static, deadly to pests but harmless to humans.

Boy Friend (calling fiancee): "Hello dear, would you like to have dinner with me tonight?"

She: "I'd love to."

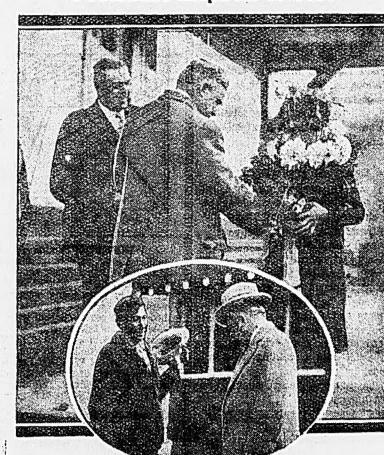

He: "Well, tell your mother I'll be over early."

The vulture can see from a great height, while the chick, or the wren, will peck at objects so small that the human eye misses them.

The only place a woman cannot attain her point is on a lead pencil.

The French perfume industry is valued at \$36,000,000 a year.

President Inspects Resort

Among the many places visited by E. W. Beatty, chairman and president of the Canadian Pacific Railway, and the directors who are now on a tour of the company's properties in the west, was the famous fishing and hunting resort at Nipigon. Mr. Beatty is seen accepting a bouquet of Nipigon Chrysanthemums from Miss Esme Porter, daughter of the operator at Nipigon Depot, and is also shown conversing with Tom Running Deer, Indian guide attached to the camp. The president and directors spent several hours in the camp on their way to the west.

West Gong Ahead

Daily News Bulletin Service To Be Supplied Residents Of Far North By Edmonton Station

Sir Henry Thornton Takes Note Of Developments On Trip To Western Canada

"There is a silver lining to the cloud insofar as the situation in Western Canada is concerned," stated Sir Henry Thornton, chairman and president of the Canadian National Railways, on returning to his headquarters in Montreal, after a tour which took him throughout the Western Provinces and to the Pacific Coast.

"While it is true that the West is not harvesting such a voluminous crop as in average years, and it is also true that some farmers and some districts are hard hit, it must be remembered that there are districts and farmers in those districts who have harvested better crops than they anticipated a short time ago, and who are reaping the benefit of higher prices from their heavier grain from last year, and also higher prices for the grain which they have produced in 1929."

The West has gone ahead and is going ahead; building up on a basis of sound progress, and one going from the East cannot fail to be impressed with the same development which is taking place on all sides.

"On the Pacific Coast, in particular, the development of trade with the Orient is being closely followed, and there is also a realization of the fact that Canada is sharing and will share to a greater degree in the further development of that trade. Sir Henry said, concluding with the statement that he had inspected the properties of the system in each of the provinces visited and he had found things in good condition everywhere with the officers and employees keenly on the alert to provide the best service to its patrons.

Russian Farm Uses Machinery Exclusively

Soviet Grain Trust Cultivated 350,000 Acres Of Land This Year

M. Kalmanzon, head of the Soviet Grain Trust, when in New York recently, stated that the Grain Trust cultivated 250,000 acres of land this year. It was formed last year to organize and operate large grain farms entirely by machinery. The Giant Farm in the Northern Caucasus, has a cultivated area of 120,000 acres. The sowing period of this farm lasted only 9 days, 650 tractors were involved, and this is the world's largest farm using machinery exclusively.

One day, when the King was walking in the grounds at Bagshot with the Duke of Connaught, Lord Macduff was told by his nurse, "Look there is the King, with Grandfather."

"Oh, no," said little Lord Macduff, "that is not the King. That is my Uncle George."

The only place a woman cannot attain her point is on a lead pencil.

The French perfume industry is valued at \$36,000,000 a year.

Residents of Aklavit and other points inside and outside the Arctic circle in the far north are to be given a daily news bulletin through the action of Hon. Charles Stewart, minister of the interior, who with the co-operation of the Royal Canadian Corps of Signallers has inaugurated a wireless news service which will do much to improve the isolation of those pioneer men and women — traders, ranchers, trappers, prospectors, missionaries, doctors, teachers and members of the Royal Canadian Mounted Police who are carrying civilization into the far north.

For the past few years the residents of the Mackenzie District have had the benefit of the wireless service for telegraphic purposes. Stations at Fort Smith, Resolution and Simpson, in the valley, and Aklavit and Herschel on the Arctic coast, have been linked up in this manner with the R.C.C.S. station at Edmonton, but only commercial and urgent private messages have been handled. However, Mr. Stewart felt that something more could be done with the equipment, and he has now, in co-operation with the department of national defence, made arrangements whereby every day one of the officers of the Department of the Interior, at Edmonton, prepares a 500-word bulletin of news of special interest to northern residents, to be broadcast to the receiving stations of the north.

The bulletins thus received are posted at the local offices of the North West Territories and Yukon branch, and at all police posts where they are obtainable, and where they can be read without charge by the residents of the various settlements.

The work has been placed in the hands of assistant commissioner of Dominion lands, R. B. Matheson, at Edmonton, and the first 500 word bulletin has been sent out. The news bulletin will be continued without interruption as far as possible, and according to northerners now in the city will prove of inestimable benefit to people living in the outlying sections who will thus be kept in touch with world events and Canadian happenings of particular interest to them.

Describing a Canadian

Immigration Act Leaves Room For Argument

From time to time the question is asked: "What is a Canadian?" There is an agitation for provision in the census defining Canadians and it is likely this will be done in the next census two years hence.

As a matter of fact, a Canadian is clearly described in the Immigration Act as follows:

(i) A person born in Canada who has not become an alien; (ii) a British subject who has Canadian domicile; or (iii) a person naturalized under the laws of Canada, who has not subsequently become an alien or lost Canadian domicile.

This would appear to meet the case adequately.

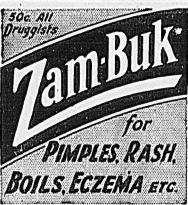

Investigate Movie Industry
Professor Kenneth W. Taylor, of the economics department of McMaster University, has been appointed by Hon. Peter Heenan, minister of labor, to assist in the preliminary inquiry, under the Dominion Combines Investigation Act, into the alleged combine in the motion picture industry in Canada, it was announced by the Department of Labor.

Whether an individual who owns a piece of property also owns the air above it, and whether he may sell or lease the air, is a disputed legal matter.

Sugar is found in the sap of nearly 200 plants and trees.

"You are lucky in love, Mr. Du pont?"
"Exceedingly—I am still a bachelor."—Moustique, Charleroi.

WORLD HAPPENINGS
BRIEFLY TOLD

Great Britain in 1923 had the lowest infant death-rate ever recorded. Out of every 1,000 children who lived to be one year old, only 65 died.

The population of Saskatoon is nearing the 50,000 mark, according to 1920 issue of Henderson's Directory. It is now estimated by the publishers that this city has 47,563 residents.

The Aero Arctic Association has announced that financial backing has been obtained for the Arctic expedition of the Graf Zeppelin next spring. Dr. Hugo Eckener, commander of the dirigible, will have 45 persons with him on the flight.

The promotion of Charles Clifton Perry from the post of Indian agent at Vancouver to that of assistant Indian commissioner for British Columbia, at Victoria, has been announced by the civil service commission.

Some of the first issue of Danish cancer stamps have been seen in London. These stamps issued by Denmark to benefit the Danish cancer fund, are in three colors, red, green and blue, in three denominations. All bear the Mercury wand design.

It's just as easy to get wrong numbers at sea now as it is at home. Telephone booths and other conveniences have been built on the steamship Berengaria for regular land communication while the ship is going between England and other countries.

A reward of \$1,000 has been offered by the provincial government for information leading to the arrest and conviction of person or persons in the Doukhobor district responsible for the burning of schools throughout the area. This announcement was made by M. A. MacPherson, attorney-general.

The Newspaper Guide

Advertisements Are To Shoppers
What Time-Table Is To Traveller

The newspaper that carries a good line of advertisements is to the shopper what the time-table is to the traveller. Busy people start to study these advertisements in the home or in the office, and before they start shopping they know where they are going. In fact, business places are points of interest to all tourists, and the non-advertiser puts himself outside the pale so far as strangers are concerned.

Edmonton Building Permits

Building permits in Edmonton topped the \$4,000,000 mark this year, up to the end of August, being \$4,183,290 or more than a million above the similar eight-month period of last year.

Extending Radio In Arctic

Russia is rapidly modernizing its Arctic possessions. The radio and meteorological station at Franz Joseph Land already is functioning, and another is being constructed on Wrangel Island.

A Bible from the Russian Imperial Palace of Tsarskoye Selo, its cover encrusted with diamonds and emeralds, was recently offered for sale in England.

"Come and sit on my lap, Fritz."
"But grandma, you are sitting on it yourself!"—Hummel, Hamburg.

Germany Planning
World Plane LinesCompany Aims For Regular Flying
Boat Service Over Atlantic In
Two Years

A gigantic network of air lines which will cover the entire world is being planned by Lufthansa, Germany's most important air company. The plans are being worked out by Otto Merkl, who has given up his post as head of Lufthansa to devote himself to founding an international company, which promises within two years to open regular air lines between Europe and the United States.

Working jointly with the Hamburg-American steamship line, preliminaries have been completed. The details of the new company are still somewhat uncertain, but the approximate direction of developments has been mapped out.

"Not only is the world's interest concentrated in air travel, but in all countries the best technical experts are working out the details," said Herr Merkl. "The experimental stage is behind us and the goal is clear. We have fine 'planes' and, especially in America, excellent motors, and everywhere responsible pilots and dependable instruments which will result in an even higher standard soon."

Device Registers Accidents

New Invention To Help Catch Hit-and-run Driver

A device to catch "hit-and-run" drivers of automobiles has been made by a Berlin inventor named Rudolf Hofmann. The mechanism described as "an automatic traffic protector."

It is adjusted under the chassis of an automobile and at the instant of any impact automatically raises a white plate with a winking red light above the car's license plate. It also registers the automobile's speed.

Winnipeg Newspaper Union

PARIS COTTON FROCK

It is quite possible to appear smart, dainty and comfortable this season, because Paris deems the sheer printed cottons are the newest choice for summer wear. Style No. 562 is a simple frock with a printed cotton voile. It is in flattering caprice tones which enhances the charm of the sun-tan complexion.

The apparel is in plain, or in a delicate tone with a patterned inset in circular inset of skirt. The hip-line is given a swathed effect through drapery of skirt. It is a fetching dress for a girl or woman.

It comes in sizes 16, 18 and 20 inches bust. Printed lawn, sheer linen in pastel or print, flowered chiffon, shantung, printed rayon silk crepe, de chine, and organdie crepe appropriate.

Pattern price 25 cents in stamped coin (coin is preferred). Wrap coin carefully.

Millions In Waste

Ford Plants Save Everything From Diamonds To Blotting Paper

Some most unusual items find their way into the revenue-producing scrap heaps at the plants of the Ford Motor Company.

Among these items are a card of blotting paper each week; sale of scrap iron and a huge amount of coke. Sale of scrap of all kinds last year netted the company \$2,573,877.60. This figure represents only scrap that was sold; vast quantities in addition were salvaged and converted into use by the company.

Next to the sale of coke, the largest single item in revenue-producing products is scrap metal. Twenty-eight freight cars on an average pull out of the plants each day loaded with metal shavings and trimmings—about 900 tons. More than half of this represents trimmings from machine shops and is sold outside mills for conversion into new metal.

The rest of the metal scrap is of the type worked entirely in open-hearth furnaces and a considerable volume of such waste never leaves the Ford plant, being converted there for further use.

The blotting paper is salvaged after use as a cushion between plates of glass. It loses none of its value as blotting paper and is resold.

Silver is recovered from salts used in the photographic department; diamonds are salvaged from hard cutting tools, and not the least are the left-overs from the wool upholstery. This latter waste is sold to an optical firm to be made into polishers for eyeglasses.

Established Penny Post

Sir Rowland Hill Recommended Low Rate In 1837

A little over fifty years ago Sir Rowland was presented with the freedom of the City of London as a tardy acknowledgement of the great service he rendered in the establishment of a penny post. It was in 1837 that Hill published his famous pamphlet recommending that within the United Kingdom the rate for letters not exceeding half an ounce in weight should be one penny. The use of postage-stamps was mentioned almost diffidently, for Hill wrote: "Perhaps the difficulties might be obviated by using a bit of paper just large enough to bear the stamp, and covered at the back with a glutinous wash which, by applying moisture, might be attached to the back of the letter." The Act enacting the penny post received the Royal Assent in 1838.

Marquis Likes Harvesting

Heir Of Duke Of Montrose Spends Summers On Canadian Farm

A scion of a titled house with a liking for work is the Marquis of Graham, elder son and heir of the Duke of Montrose. While other young men are sun-bathing at Dearville and on the Lido, he comes to Canada to act as a harvester. This is the second year in succession in which for several weeks Lord Graham has elected to put in work on a Canadian farm. He is a nice-looking fresh-faced man of 22, and good at his work.

Pat (to tourist)—"We have great athletes in Ireland."

Tourist—"Why, our champion ran 18 miles and then jumped a nine-bar gate."

Pat—"Oh, that's nothing; when you think of the run he had at it."

"Dae ye ken that your hens come over into ma garden?"

"I thought they must be daein' that."

"Whit mak's ye think see?"

"Because they never come back."

The average weight of a hen is five to twelve ounces.

Wife: "Please come and help, I can't get the trunk closed alone."—*Lustige Sache, Leipzig.*

W. N. U. 1805

Marking Pigs For Identification

The Use Of Metal Tags Is the Most Common Practice

Where hogs are bred in large herds it is necessary to follow some sort of marking for identification. One method which is followed by some is that of nicking the ears, pigs in each litter being marked on a similar part of their ears. By means of various combinations of marks quite a large number of different litters are marked, and subsequently identified. This method is faulty in that the ears may be torn and the marks destroyed. It has another weakness in that it does not serve to identify the individual pigs within the litter. The use of metal tags is a general practice on some hog farms. These are stamped with combinations of letters or figures, and as each tag has a different combination a ready means of identification is assured. The most satisfactory type is that which is self-clenching, and when inserted in the ear remains there permanently unless torn out. When this happens, which is but rarely, a duplicate may be inserted. In order to avoid confusion the tag should be inserted in the ear at or before weaning time. The Dominion Animal Husbandman, who has a wide experience in marking hogs for identification, calls attention in his report for 1923, published by the Department of Agriculture, at Ottawa, to the use of the tattoo in marking swine officially recognized by the National Pig Breeders' Association of Great Britain. This method of marking is undergoing tests at the Experimental Farms with the object of determining its value as a means of identifying swine.

Suggested Economic Parley

Other Dominions Asked Some Time Ago To Meet At Ottawa

Premier Mackenzie King has suggested that Canada and some time ago to the other Governments of the British Empire that an economic conference be held at Ottawa this year. It was not found possible, however, to arrange for the holding of a conference so soon.

In making these statements the Prime Minister pointed out that Canada would welcome an economic conference in the Dominion. "It is exactly what we would wish," said Mr. King. On the other hand, it was the desire of the Dominion to suit the convenience of all parts of the Empire, and if the general feeling was that the conference should be in London, England, Canada would be prepared to acquiesce. The Prime Minister said that there would probably be an economic conference either here or elsewhere, next year.

Work Horses Shipped East

Saskatchewan Horses Are Shipped To Lindsay, Ontario

Under the auspices of the Saskatchewan Live Stock Pool, and the Provincial Government, an inaugural shipment of carefully selected work horses was made from Maple Creek to the other day to the order received by W. Waldron, Martens Commissioner, from the F. J. Carew Lumber Company, Lindsay, Ontario.

These horses are required for bush work, and are young, upstanding, heavy weighted teams, and were inspected by Dr. M. P. McClellan, Veterinary Officer of the Provincial Department of Agriculture. A co-operative horse marketing organization for Saskatchewan has been a long felt want and the need has now been supplied by the formation of a horse marketing division of the Saskatchewan Live Stock Pool, supported by the Provincial and Dominion Departments of Agriculture.

All the Same To Him
His wife had gone to visit her mother, and had telephoned that she would not be returning until the morning.

When she got home, she said to her husband: "You managed to find something to eat last night, didn't you, dear?"

"Oh, yes," he replied亟ealily. "I had the steak that was in the pantry and fried it with some onions that I found in the cellar."

"Onions?" she gasped. "Darling, you've eaten my flower bulbs!"

The Haberdasher—Yes, sir, those socks will give perfect satisfaction; I've worn them myself for the last two months.

The Customer—Have you a pair like them that you haven't worn so long?

"Hans, did you hear the step-ladder fall?"

"Yes, mummy."

"I hope daddy hasn't fallen."

"Not yet—he is still hanging by his waistcoat to the picture hook!"

Keeps Lonely Vigil

Secretary Of Ancient Cutlers' Company Only Member At Yearly Meeting

Every year on August Bank Holiday (the first Monday in August) the secretary of the Ancient Cutlers' Company, in Hallamshire, keeps a lonely vigil at Cutlers' Hall, where he arranges a meeting for members of the company who he knows will never come, and never have come on this particular date.

An old Act of Parliament, passed as part of a charter of the Cutlers' Company, in Hallamshire, keeps a lonely vigil at Cutlers' Hall, where he arranges a meeting for members of the company who he knows will never come, and never have come on this particular date.

In these days no meeting is held, but to comply with the statutory requirements, provision has to be made for a gathering at Cutlers' Hall. The presence of at least 40 members would be necessary if a meeting took place, for this number is needed to form a quorum. If the act of Parliament were to be altered to avoid the necessity of the secretary attending, it would cost about \$4,000 in legal fees and other charges, and so from one o'clock to three o'clock, the secretary sits and waits the errant members who are probably enjoying their holidays.

Menace To Garden Corn

Worm Destroys Kernel When Near Cooking Stage

Since the European corn-borer has been doing damage to corn fields in Canada, it has often been confused with another worm, particularly in garden corn, says a Federal Department of Agriculture bulletin. The corn-eatworm, unlike the corn-borer, works in the ear, eating out the kernels of the corn when at the cooking stage. The caterpillar of the corn-eatworm when mature is from 1½ to 1¾ inches in length. It varies in color from light green to dark brown, with rather indistinct stripes on the back and a wider and inconspicuous pale colored band along the side. Its head is black.

The "staff" of the Star, as revealed by his photograph, shows no signs of the wear and tear which might be expected. Yet, in addition to general news, his July 19 edition contains seven or eight columns of "personals," and all country editors know how much work it takes to compile these. All the overworked who may hear of the gallant Mr. Skinner will wish him health and success and look forward to an early day when from the list he gives of his duties he may at least strike off the one of sweeping out the Star office.

A Luxury Already

What with airplanes attaining a speed of 320 miles an hour and automobiles whizzing along at sixty and seventy, motorboats skimming the waves like a flash of light, how long is it going to be before a nice quiet stroll is going to be a luxury?

There is no room for trouble in an air castle.

The secret of success lies in the man and not in the stuff he works on.

Amalgamated Civil Servants

Glue From Sweet Potatoes

Commercial Production For Use On Stamps To Be Undertaken

A new item looms on the horizon of personal liberty—the privilege of licking stamps that suit the individual taste.

Scientists in the bureau of chemistry and soils have discovered that a high quality starch is obtainable from sweet potatoes. From the starch they have produced dextrin of pleasant taste. They are testing its suitability as glue for stationery and stamps.

All that is left to do is to develop a method of economical commercial production. It is to be undertaken this fall, when the sweet potato crop is harvested. Unofficially, it is believed dextrin can be made from sweet potatoes as cheaply as from tapioca, the present source of most stamp and stationery glue.

If it can, and manufacturers are able to pay enough for sweet potatoes to make it worth the producers' time to market cults, solution has been found for the tremendous waste that has forced many farmers to quit raising them.

It is estimated that about 20 percent of the country's average production of 80,000,000 bushels is cults, therefore suitable only as feed for cattle and hogs.

Five pounds of sweet potatoes, says Dr. W. W. Skinner, assistant chief of the bureau's chemical and technological research, makes one pound of starch. At that rate he estimates a market for 870,000,000 pounds, or 17,400,000 bushels of sweet potato cults.

A One-Man Newspaper

"Staff" Of "The Star" At White Horse, Yukon Is Kept Busy

Mussolini may hold seven or eight cabinet offices in Italy, but he has more than a rival in J. D. Skinner, of White Horse, Yukon Territory. For he is porter, reporter, advertising department, composing room, mailing room, publisher and financier of the White Horse Star. He thinks, he says, that his is the only one-man newspaper published in Canada. There may be others there and elsewhere, but a glance at the issue of July 19, shows a publication free from typographical errors, well edited, and illustrated with various factors in the news, and not the least of which is a photograph of Mr. Skinner himself.

The "staff" of the Star, as revealed by his photograph, shows no signs of the wear and tear which might be expected. Yet, in addition to general news, his July 19 edition contains seven or eight columns of "personals," and all country editors know how much work it takes to compile these. All the overworked who may hear of the gallant Mr. Skinner will wish him health and success and look forward to an early day when from the list he gives of his duties he may at least strike off the one of sweeping out the Star office.

Lightening the Load

If Canada continues as in the past fiscal year, to devote \$186,392,025 to interest and debt redemption, this country will be free from debt in twenty-five years. Every year the dead weight of interest lightens, having decreased \$23,000,000 since 1921, when the maximum was \$189,531,320 for that year.

The secret of success lies in the man and not in the stuff he works on.

"Harry, I don't believe that you put the cat out."

"Well, if you think I'd tell a lie about a little thing like that, put her out yourself."

English Gardeners Value Toads

English gardeners are always in the market for live toads, and not infrequently as much as \$35 per hundred is paid for this insect destroyer. It is estimated that every time a boy kills a toad, he is destroying \$100 worth of stock on a farm.

Instructions for killing and packing for market are included in the bulletin.

Finishing Poultry For Market

Putting Finishing Touches On Poultry Before Offering For Sale

The time would seem to be past when poorly finished poultry can be marketed with profit. Indeed it is held by authorities that putting the finishing touches on market poultry before offering it for sale, yields the greatest proportionate return of any labour done on the poultry farm. Well finished broilers or roasters undoubtedly cost less per pound to the producer than those that are poorly fleshed, and are much more desirable to the consumer.

The past methods of finishing poultry for market are described by Mr. F. C. Elford, Dominion Husbandman, in Bulletin No. 20, of the Department of Agriculture, at Ottawa. Crate feeding, especially for cockerels, is highly recommended, but it is also claimed by Mr. Elford that it will pay to adopt this method with pullets and hens when they are to be sold in dressed condition. Crate feeding is done both in small crates suitable for small flocks, and in feeding batteries for those who buy in chickens to finish in a large way.

In putting in a batch of chickens to be fattened it is recommended to allow them to miss a meal and to feed sparingly for several days. This plan is necessary to avoid indigestion with birds that have been confined in small quarters after having been accustomed to free range. Twenty-four hours of fasting are recommended at this stage. After the birds have become accustomed to confined quarters by merely increasing the feed they should be fed two or three times a day all they are able to take, and after each feed the trough should be cleaned. Plenty of water at all times is necessary and a feed of grit several times a week is advised.

There are many ways of preparing the feed. This bulletin, obtainable from the publications branch, Department of Agriculture, at Ottawa, recommends the use of only ground grain, fed in a wet state of a consistency that it may be poured from the pall or dipped out with a flat ladle. Butter milk is recommended next in preparing the feed. When skim milk is used it is recommended to allow it to sour slightly and to mix one feed ahead. A little salt added to mash encourages chickens to eat more of the feed. Practically all of the coarser grains are suitable—corn, oats, barley, buckwheat, and wheat, etc., may be mixed in any combination, but they should be finely ground and the coarser hulls removed. If water has to be used instead of milk in preparing the feed from 5 to 100 per cent. of animal foods, such as beef scrap or blood meal should be added to the grain mixture.

Instructions for killing and packing for market are included in the bulletin.

Valuable For Briquettes

Newly Discovered Coal Taken From Ontario May Be Used For This Purpose

Samples of coal taken from the area at Blacksmith Rapids, on the Abitibi River, where Ontario engineers have discovered extensive deposits, have been analyzed by the Federal Department of Mines experts, and indications are that the coal is valuable as material for briquettes or powdered coal.

Considerable treatment would be necessary before it could be of commercial value. However, the samples which the department examined were taken from seams near the surface, and it is believed a better product might be found at greater depth.

"Most men who reach the top of the tree are lonely," it is stated. They often sacrifice too many friends on the way up.

Lay-out of the grounds of the Banff Springs Hotel, where the Banff Highland Gathering and Scottish Festival and the Dominion Track and Field Championships were staged recently. Centre photograph shows the grounds and (1) Piper Hector McDonald, Montreal, winner of first prize for strathspeys and reels, second prize for marches and winning the highest aggregate points over all in the open piping events; (2) Pipe-Sergeant Donald McLeod, of the Queen's Own Cameron Highlanders, Winnipeg, winner of the special trophy donated by E. W. Beatty, for the best piper among the delegate pipers from the various Highland regiments of Canada; (4) Lieutenant-Governor Wil-

lam Egbert, of Alberta, and Randolph Bruce, of British Columbia, at the Festival.

The Singing Fool

By HUBERT DAIL

Copyright, 1923, Warner Bros.

SYNOPSIS

Al Stone, singing waiter at Blackie Joe's New York night club wins fame on Broadway as a composer of popular songs. He marries Molly Winton, ballad singer, and makes her his manager. Al has a baby, Junior, whom Al adores. Molly becomes romantically interested in John Perry, Al's close friend, and Perry begs her to leave Al. On the anniversary of their marriage Al takes Molly home from the Club Bombo, where he is part-owner. She is moody; her conscience bothers her because of her bad ways. Her moodiness intensifies when Al goes to the nursery and she sees how ardently he loves Junior. Later, in a burst of rage, she tells Al she doesn't love him any more. As Al recalls, Molly has never called him.

CHAPTER XV.

Junior had awakened to find that his toy, his wooly dog, had dropped out of bed. So he was calling to Molly to come and get it for him. As his high childish voice drifted through the rooms to Molly and Al they gave a start. The expression on Al's face softened as an instant Molly's remained the same as she brushed by Al to look after Junior.

Al turned, looking after her retreating figure, still in a daze from her harsh words. He had lost her love, she actually said so herself! Her words and the heart-breaking scene he had just passed through seemed fantastic and unreal to him. What had he done to deserve her indifference and her scorn?

Then, like a man in a dream, he followed her toward the nursery. Standing in the doorway, he saw her pick up Junior's wooly dog from the floor, replace it in the child's arms, and carefully tuck him in.

"Go to sleep, now, Junior. Then Mamma can sleep too."

How strangely contrasting was that soothing voice to the tone Molly had just used in addressing Al! And how kind the expression on Molly's profile as she bent over Junior's bed. Surely this was not the end, thought Al. He suddenly determined that he would not let their life together be blasted by her whim; he would fight to reawaken Molly's love!

As Molly came toward him, he raised his hand with an apologetic gesture. "Darling, can't we talk this out? If I've done anything tell me!"

"No—no more talk!" Molly passed him, entering her bedroom. He heard her door close with a snap of flint.

But now Junior was sitting up, holding out his arms to his father. "Daddy, please sing me to sleep."

Al came forward swiftly, picking up Junior, holding him close as if to drive away the wound Molly had inflicted. Here, at any rate, was someone who loved him, trusted him, and always greeted him with the same adoring, happy smile.

For a moment Al choked up and couldn't speak. Then he said huskily,

with the true spirit of abandon as midnight approached. Long streamers of confetti in brilliant red, green, blue, yellow and purple were shot across the room, describing graceful curves before they fell across the dining tables and the shoulders of the dancers. It was the biggest crowd the Bombo had ever entertained and on the raised orchestra platform, stood Al, wearing a fantastic head-piece, a megaphone in his hands. He was leading the merriment, but the ache in his heart was still present.

Perhaps, he thought, the unrestrained gaiety of this night would change Molly's mood so she would become her old, friendly self. He gave a hurried glance toward her reserved table; she should be here by now. Then came the distracting business of introducing the celebrities, and once more he glanced at the vacant table and consulted his watch. Molly was at least a half hour late. He nodded toward the orchestra leader, signalling for another dance.

As the dancers swept toward the floor he retreated among the tables. What was keeping Molly? He could hear the shrieks of the stream from outside—the New Year had arrived, the time when feuds and misunderstandings are forgotten, new resolutions are made, and life begins anew. All this, he hoped desperately, would influence Molly.

The orchestra was playing with staccato briskness and abandon, the couples swayed and snuggled and called to one another.

"Choose a partner yourself!" cried a friend in passing, clapping Al on the shoulder. Al laughed in answer, but a moment later he moved toward the phone room at the rear.

Perhaps Molly had gone straight home from the theatre—must find out why it could not be done.

THE RESPONSIBILITY OF EVERY MOTHER

The phone room was a sort of alcove, with three or four booths.

Al entered one, pulling the door shut and calling his apartment number. But the door suddenly sprang open, allowing a roar of happy sounds to enter. Just then he heard a faint echo of the other end of the wire.

Molly's voice, he thought. He quickly pulled the door shut again and said:

"Molly, dearest, I've been holding your table for you—hoping you'd come."

But again the door flew open and he missed the answer.

Intends To Collect Pay

Circus Water Carrier Inherits Fortune But Wants His Wages

A 21-year-old \$3-a-week water carrier for a circus playing in Portland, remained at his post under the white top and refused to leave to collect a \$275,000 inheritance available in Los Angeles, because, he declared, the circus owes him \$60 "hold back" money, which he won't get if he leaves.

The youth, Robert Sterling, of Philadelphia, said he would remain with the circus until it reached Los Angeles, where he would answer personally the telegram received from an attorney informing him of the inheritance left by his father.

Sterling said when the Radio Corporation of America was organized his father operated a radio shop in Philadelphia and purchased a few shares of stock in the corporation.

When the elder Sterling died in 1927, Robert said, he left the stock in keeping of a Los Angeles attorney until Robert became of age. Young Sterling became 21 years old on Jan. 20, but he said he was so "busy filling the cook house tanks with water," that he paid little attention to the attorney's notice.

To have the children sound and healthy is the first care of a mother. They cannot be healthy if troubled with worms. Use Mother Graves' Worm Exterminator.

Paris Is Particular

Unaccompanied Women Are Refused Service In Many Cafes

Numerous cafes in Paris still refuse to serve unaccompanied women and the newspapers have taken up the question of the removal of the ban. They argue that times have changed and that women should be catered to even when alone. The fact seems surprising from a New World point of view. On this side of the water nowadays women go unaccompanied to theatres, cafes, hotels and all other public places, and the fact of their being alone is unobserved.

Applies To Every Nation

If China and Russia should go to war ninety-five per cent of the population of either country wouldn't know what it was all about. But that is pretty nearly the case with a war in any nation.

Says Vancouver Best Outlet Nothing In Way Of Branch Lines For Peace River District Declares Beauty

"When rail connection is established between the Peace River District and the Pacific coast, it would appear that Vancouver would be the logical point for the outlet on the coast," declared E. W. Beatty, president of the Canadian Pacific Railway, who returned to Vancouver Wednesday from Victoria.

Mr. Beatty was non-committal as to when and how rail connection would change Molly's mood so she would become her old, friendly self. He gave a hurried glance toward her reserved table; she should be here by now. Then came the distracting business of introducing the celebrities, and once more he glanced at the vacant table and consulted his watch. Molly was at least a half hour late. He nodded toward the orchestra leader, signalling for another dance.

As the dancers swept toward the floor he retreated among the tables. What was keeping Molly? He could hear the shrieks of the stream from outside—the New Year had arrived, the time when feuds and misunderstandings are forgotten, new resolutions are made, and life begins anew. All this, he hoped desperately, would influence Molly.

The orchestra was playing with staccato briskness and abandon, the couples swayed and snuggled and called to one another.

Real Dyes are easier to use

Agree Diamond Dyes are better dyes. It is higher quality dyes prepared for general use. It will dye *not* silk, wool, cotton, linen, rayon or any mixture of materials. The *blue package* is a spot dye for silk and cotton. It gives depth and brilliance to every kind of goods, including silk and wool. Your dealer has both packages.

DIAMOND DYES are used by practically the same method as any other dyes, though more smoothly and evenly without spotting or streaking. That's because they are made from real dyes without a trace of fillers to injure fabrics or give things that redyed look.

Diamond Dyes contain the highest quality dyes that money can buy. That's why they give such clear, bright, new-looking colors, which last longer and brighter than any mixture of materials.

When you buy dyes to dye

Strange Aerial Cargoes

Airplanes Are Now Used To Carry Every Kind Of Shipment

Fifty tons of milk are being carried every week by aeroplanes between London and the Continent, says a Tit-Bits writer.

Recently a consignment of sea horses for the Zoo arrived by aeroplane at Croydon. Great care was lavished on these fantastic creatures, half horse and half dragon, which were caught in the Bay of Biscay, and throughout the flight air was pumped into their tanks at ten-minute intervals.

Delicate goldfish are often transported in this manner, but the most valuable fish cargo by air was a number of very rare, rainbow hued specimens from the East Indies, some of which were valued at \$180 per inch.

A barred cage was recently built inside the fuselage of an aeroplane which left Croydon for Le Bourget, where it picked up a fully grown lion, complete with trainer, and brought them back at over 100 miles an hour.

Another special compartment was fitted in an aeroplane to accommodate a performing circus horse from Paris to London; while an air freighter arrived recently from Amsterdam with a bear, a monkey and a consignment of parrots.

Twenty years ago it would have been impossible to build a road to the site of the new observatory on Mount Blanc. The aeroplane has made it possible to convey the stones and materials to a height of over 13,000 feet on the mountain side; but when the road is completed it will be one of the most expensive in the world.

It seems strange that milk, easily obtainable in all great cities, should be carried by air, but mysterious zinc-lined boxes were once regularly carried from Croydon to Paris, and these contained two gallons of milk in glass bottles, packed in ice. The American visitors to whom the boxes were addressed had been impressed with the purity of English milk that they cheerfully paid 80c. a pint to have it delivered to them in Paris!

Would Change Denomination

A party of clergymen were attending a Presbyterian conference in Scotland. Several of them set off to explore the district.

Presently they came to a river spanned by a temporary bridge. Not observing a notice that the bridge was unsafe, they started to cross it. The bridge-keeper ran after them in protest.

"It's all right," declared the spokesman, not understanding the reason for the old man's haste; we're Presbyterians from the Conference."

"I'm no 'canin' about that," was the reply, "but if ye dinna get off the bridge ye'll all be Baptists!"

One reason why the world loves a lover is probably because he never parks his car so it will obstruct traffic.

Mortgage Sale of Valuable Farm Property

Under and by virtue of the Powers of Sale provided by the Land Titles Act, under a certain mortgage which will be produced at the time of the sale:

There will be offered for sale by public auction at the Acadia Hotel, in the Village of Chinook, in the Province of Alberta, on Saturday, the 12th day of October, 1929, at the hour of two o'clock in the afternoon, the following property, namely:

South-east quarter of Section Fourteen (14), Range Twenty-seven (27), Range Eight (8), West of 4th Meridian, Alberta, excepting all mines and minerals and the right to work the same.

Terms of the sale to be 20 per cent, cash at the time of the sale, and the balance according to the terms and conditions to be made known at the time of sale or upon application to the vendor's solicitors.

The above property will be offered for sale subject to a reserve bid and free from all encumbrances, save share lease expiring the 31st day of December, A.D. 1930, terminable by notice at any time between the 1st day of December, A.D. 1929, and the 1st day of May, A.D. 1930, and taxes for the current year.

The vendor is informed that the above property is situated about 133 miles from Chinook, and that improvements consist of frame house 22x12, frame granary 12x12, frame stable 12x16, and frame bin 12x16, with 16x16 floor joists. There is a well on the property, and soil is clay loam with clay subsoil.

For further particulars and conditions of sale, apply to Brownlee, Porter, Goodall & Rankine, 436 Lougheed Building, Calgary, Alberta. Dated at Calgary this 11th day of July, A.D. 1929.

Approved: [Sgd.] W. Forbes,
Registrar.

Notice To Threshermen

Owners or operators of threshing machines or combined harvesters are requested to have their machine registered with the Department of Agriculture and to send the Department at the end of the threshing season a return showing the number of acres and number of bushels threshed. This applies whether the machine is to be used for custom work or only for the owner's own use.

Special forms for these returns may be secured from the

PUBLICITY BRANCH,
Department of Agriculture, Edmonton

With the probable construction of storage elevators for wheat in the Old Country, it is likely delegates from the Canadian Pools will be sent across to attend the conference to be held shortly.

Three members of the new Saskatchewan cabinet will have to stand for election on Oct. 14th unless opposition is withdrawn. Premier Anderson and four of his cabinet have been returned by acclamation.

Bill says: "Thinking without acting is almost as bad as not thinking at all."

THE FORD CAR SHATTERPROOF GLASS WINDSHIELD

Protection with Clear Vision

THE shatterproof glass windshield on all Ford cars is one of many important safety features that contribute to the pleasure and comfort of all Ford Model "A" owners. The peace of mind and feeling of security made possible by this factor of safety is further enhanced by the clear vision roof pillars, six-brake system, ¾ irreversible steering, one piece gas tank and all-steel body.

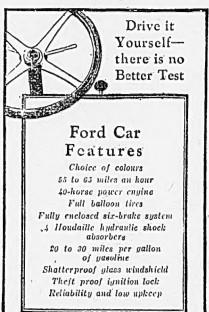

The Ford car shatterproof glass windshield does not splinter under the impetus of a direct blow. In case of a collision there is no flying glass to endanger driver or passengers.

The vision is clear and unobstructed with the Ford shatterproof glass windshield. At the same time the driver realizes that this windshield is a protection and a factor in creating driving confidence and owner enthusiasm.

The Ford car shatterproof glass windshield is fully enclosed in a steel frame.
